

Development of Fish Value Chain Program (DEFIP) - Cambodia component

Cambodia is one of the world's leading producers of freshwater fish. However, the sustainability of this resource is threatened by the degradation of resources and climate change. In particular, the balance of the Tonle Sap is weakened due to overfishing, deforestation and pesticides. From 2020, the two NGOs APDRA and TCO will work with smallholders in this area in order to locally develop agro-ecological fish farming.

« Promote an agro-ecological and sustainable family fish farming »

Project identity

Duration
2,5 years, 2020—2022

Location
Siem Reap Province

Funding
Agence Française de Développement (AFD)

Local partner
Trailblazer Cambodia Organization (TCO)

Context

- A program implemented in five countries: Côte d'Ivoire, Cameroon, Congo, Madagascar and Cambodia, with the aim of **promoting the development of a family agro-ecological fish farming for commercial purposes**
- In Cambodia, the NGO TCO is already involved in improving the living conditions of local people and has already carried out actions to develop fish production
- In the irrigated perimeters bordering the Tonle Sap, a strong potential for rice / fish-farming associations exists and generates great interest among producers

APDRA and TCO combine their know-how to offer smallholders a fish farming adapted to the specificities of the area.

This program is co-funded by the Agence Française de Développement

Conduct an initial diagnosis

- Conduct detailed studies of agricultural and fish farming practices around the Tonle Sap
- Define areas of intervention
- Identify smallholders interested to collaborate with the project

➔ Developing a partnership with famers committed to the approach

Develop new ways of agro-ecological intensification

- Establish a framework conducive to participatory Action Research with fish farmers and national research institutes
- Identify and support local innovation processes
- Collectively test and validate the proposed innovations

➔ Proposal of new techniques validated with fish farmers

Enhance the experience

- Set up a participatory process to learn from the experience of the project
- Create communication materials
- Disseminate the results to other smallholders and to institutions operating in the sector

➔ Highlight the potential of family fish farming
